

ABSTRACT

In our society, especially the freshers are coming out of their education level to job experience level. In such a process of finding their suitable jobs they are giving preference to some fake jobs spending time for that recruitment process. So, in order to find the fake recruitment, our project has come into existence, we are using machine learning approaches using classification techniques able to detect such fake recruitment detection processes. Different classifiers are used for checking fraudulent posts on the web and the results of those classifiers are compared for identifying the best employment scam detection model. It helps in finding the fake posts from an enormous number of posts .We can use both the single classifier and ensemble classifier .However in experimental analysis, ensemble classifiers may be showing good results over single classifiers in fake job detection.

LIST OF FIGURES

S.No.	Fig No.	Fig Name	Page No.
1.	1.2.1.1	Dataset - Attributes with description	2
2.	1.2.1.2	Dataset - Attributes with description	2
3.	1.2.1.3	Sample dataset of job_id, title, location attributes	3
4.	1.2.1.4	Sample dataset of department attribute	3
5.	1.2.1.5	Sample dataset of salary_range and company_profile attributes	4
6.	1.2.1.6	Sample dataset of description attribute	4
7.	1.2.1.7	Sample dataset of requirements attribute	5
8.	1.2.1.8	Sample dataset of benefits attribute	5
9.	1.2.1.9	Sample dataset of remaining attribute	6
10.	2.2.1	SVM	12
11.	3.2	Architecture Diagram	21
12.	3.3.1	Use Case Diagram	23
13.	3.3.2	Sequence Diagram	24
14.	3.3.3	Activity Diagram	25

15.	3.3.4	Class Diagram	26
16.	5.3	Test Cases	38
17.	5.4.1	Outliers in fraudulent attribute	39
18.	5.4.2	After removing outliers in fraudulent attribute	39
19.	5.4.3	Fraudulent percentage in dataset	40
20.	5.4.4	Visualizing categorical variable by target	40
21.	5.4.5	Comparison on characters in description	41
22.	5.4.6	Comparison on number of words in Company profile	41
23.	5.5	Input screen	42
24.	6.1	Accuracy of algorithms	43
25.	6.2	Command to open jupyter notebook	43
26.	6.3	Testcase showing jupyter notebook has opened	44
27.	6.4	Test case showing there is no error while importing modules and packages	44
28.	6.5	If no input is given, “Please enter Id” is displayed	45
29.	6.6	If string is given as input, “Please enter a number” is displayed	45
30..	6.7	If a number out of range is given as input, “Please enter valid Id [1-17880]” is displayed	46
31.	6.8	Given input ‘145’ output is predicted	46

32.	6.9	Predicted output by all algorithms (0 - real; 1 - fake)	47
33.	6.10	Given input '98' output is predicted	47
34.	6.11	Predicted output by all algorithms (0 - real; 1 - fake)	48
